Education

University of Petroleum and Energy Studies (UPES) Dehradun, India
Bachelor of Technology in Computer Science and Engineering July 2020 - July 2024
CGPA: 8.56

Experience

Urumi (UrumiAI) | DevOps Engineer Goa, IN | Jun 2026 - Present

- **Led 3 production e-commerce migrations (2 UK, 1 US) off managed enterprise hosts onto multi-tenant GKE** across 2 regions, largest tenant at **∼150GB MySQL** and a multi-hundred-thousand-file media library. Engineered the database path on **GCP Database Migration Service** as a **staged CDC chain** (source MySQL 5.7 → intermediate 5.7 bridge replica → Cloud SQL), **cutting over at zero replication lag**.
- **Architected and delivered a new AI-native e-commerce platform (EmDash) end-to-end on AWS from scratch** – from POC to production – provisioning **8+ AWS services** (EKS, ECR, RDS, S3, IAM/IRSA, ALB, VPC, ACM) as **Terraform IaC** with a **multi-tenant Helm provisioner** that spins up isolated per-tenant stores, and engineered a **dual-cloud (AWS→GCP)** integration linking AWS workloads to existing GCP services (dashboard, GitHub CI, MCP gateway).
- Built **production observability stack** (Grafana, Google Managed Prometheus, Cloud Monitoring, and **SigNoz** for centralized logging and traces) across **2 GKE regions** wired into **PagerDuty** for incident routing.
- Drove **FinOps and cost optimization** across the GCP account – a blue-green node-pool migration (4 to 8 vCPU) right-sizing the largest tenant and a dedicated→shared Cloud SQL migration that eliminated 1 redundant instance – reducing **overall cloud spend by ∼15% per month**.

Careers360 | DevOps Engineer Gurugram, IN | Sep 2024 - May-2026

- Successfully managed and scaled infrastructure during high-traffic events, handling peak loads of over **5 lakh+ requests within 30 minutes** and **1.5 lakh+ requests within 5 minutes** during the **UP Board Results** event, the highest traffic surge in the organization's history ensuring **real-time monitoring, high availability, and zero downtime**.
- Managed end-to-end release and deployment processes across staging, beta, and production environments, ensuring smooth application rollouts with **zero disruptions**.
- Achieved significant **FinOps** cost reductions across multiple AWS accounts - **25**% cost reduction in primary production account and **65**% cost reduction in secondary staging account through strategic resource management and optimization.
- Architected and **implemented Devtron CI/CD platform** from scratch for build and deployment across staging, beta, and production environments, while managing entire EKS cluster operations through Devtron interface.
- Successfully **upgraded Amazon EKS clusters** from version 1.24 → 1.28, then 1.28 → 1.30 and finally to 1.31 across staging, beta, and production environments with **zero downtime**.
- Migrated **30**% of legacy applications from traditional servers to Amazon EKS, improving scalability, fault tolerance, and resource optimization.
- Led migration from AWS **CloudFront to Akamai** CDN, enhancing performance and reducing latency by 30% for global content delivery.
- Consolidated 2 existing load balancers into a single **LB**, streamlining traffic management and **reducing infrastructure complexity by 40**%.
- Replaced the use of env-based access and secret keys with an **RBAC** role-based approach, improving security and compliance across all environments (staging, beta, and production).
- Managed and monitored **Kafka consumers** and event-driven workflows, ensuring reliable message processing across services.
- Implemented centralized monitoring and logging using the **ELK** stack to observe and troubleshoot frontend and backend applications, improving system reliability and incident response.

Careers360 | DevOps Engineer Internship Gurugram, IN | March 2024 - August 2024

- Utilized a comprehensive suite of AWS services (EC2, RDS, CloudWatch, Route53, CloudFront, VPC, etc.) to manage and optimize cloud infrastructure.
- Employed Devtron for streamlined build and deployment processes and automated tasks and workflows using Jenkins cron jobs, enhancing operational efficiency.
- Migrated **CloudWatch** metrics and logs to **Grafana**, reducing **monthly 70 percent cost**.

Visvesvaraya National Institute of Technology | Summer Intern Nagpur, IN | June 2023 - July 2023

- Implemented smart irrigation system optimizing plant watering decisions using **sensor data and Machine Learning algorithms**, enhancing overall system performance through data-driven automation.
- Improved water usage efficiency and automated agricultural practices while managing and analyzing **18 million data** points for fine-tune irrigation strategies.

Skills

Cloud Platforms:	Amazon Web Services (AWS), GCP
Container Orchestration:	Kubernetes, Amazon EKS, Docker, Helm Charts, Ingress, Autoscaling
IaC & Automation:	Terraform, Infrastructure Automation, CI/CD Pipeline Automation
CI/CD & GitOps:	Jenkins, GitHub Actions, Devtron, Argo CD, GitOps Workflows
Monitoring & Observability:	Grafana, Prometheus, CloudWatch, Alertmanager, ELK
Scripting & Programming:	Python, Bash, Shell Scripting
Databases & Data Stores:	Amazon RDS, Amazon DocumentDB, Amazon OpenSearch
Linux & System Administration:	Linux, Process Management, System Debugging, Performance Monitoring
CDN & Networking:	Akamai, Amazon CloudFront, DNS, Load Balancing, VPC Networking
Version Control:	GitHub, GitLab

Projects / Open-Source

QuillPost: A Microservice Based Blog Posting App | *Django Rest Framework, Python, React, MySQL, K8s*

- Built scalable microservices with Django (auth/comments), Spring Boot (posting), React frontend via REST APIs.
- Containerized services with Docker and orchestrated deployment using Kubernetes for scalability.

Cloud Provider Advisor | *AWS, GCP, Azure, Django, Python, JS, HTML, CSS*

- Developed multi-cloud VM comparison platform using SDKs to aggregate virtual machine data.
- Created UI for clients to search, filter, and compare VMs based on memory, storage, pricing.

Parking Spot Assigner with License Plate Detector | *Python, Yolov7, Tesseract OCR, openCV, MySQL*

- Engineered computer vision system using YOLOv7 and OCR for automated license plate recognition and extraction.
- Integrated ML solution with employee database for intelligent parking spot allocation based on proximity optimization.

Certifications

- Microsoft Certified: Azure Fundamentals - **Microsoft**
- AWS Partner: AWS Cloud Practitioner Essentials - **Amazon Web Services Training and Certification**
